JAMBox™

JAMBox Description

- ⚡ The Joystick Adapter Multi-SwitchBox (JAMBox) for remote switches enables use of external switches other than those found on the Joystick / Game device.
- ⚡ JAMBox connects in-line between the Joystick / Game device and the PC. When external switches are attached, the external switch overrides the associated button operation on the joystick. All 4 digital inputs on the gameport are supported - allows additional button inputs for existing joystick.

JAMBox Uses

- ⚡ Physically challenged users, scientific / technical, hobby, troubleshooting, prototyping, external controller interface, virtual reality, data acquisition, user interface enhancements, games, etc.
- ⚡ When combined with IMG's *Joystick-To-Mouse*, the configurable button options create an unlimited amount of configurations and applications.

JAMBox Specifications

Connector Specifications

DB-15 Connectors (Male / Female Extension, all pins connect through)
External / Remote Switch connectors:
Contact Resistance: 10 - 20 milli-ohms
Life: 10,000 cycles
Insertion / Extraction force: 0.8 / 2.0 Kgs.

Case / General

Coated Solid Aluminum (extruded) sheathing, Coated aluminum front / back plates
Electrically grounded
Weight: 0.4 Kgs.

JAMBox Requirements

Joystick / Gameport device must have Male DB-15 Connector
PC or Compatible must have DB-15 Female Gameport

External Switch Requirements

Standard 1/8 "(0.25 inch) (3.5 mm) 2 connector plug (mono) (mini-audio)
Switch must be able to withstand 5V and 100 mA
Normally Open (NO) switches match Joystick Buttons
